FELIPE DA CRUZ HOFFMANN

Senior Mobile Software Developer

felipejh@gmail.com | Caxias do Sul, RS, Brazil (GMT-3) | linkedin.com/in/hoffmannfelipe

SUMMARY

Senior Mobile Engineer with 10+ years of experience building production mobile and web applications, expert in React Native and cross-platform solutions. Specialized in full lifecycle mobile development, from offline-first architecture to store publication. Pioneer in AI-assisted development, leveraging advanced AI agents, Claude Code, and GitHub Copilot to optimize coding workflows, orchestrate solutions, and accelerate feature delivery at scale. Strong track record in fintech, subscriptions, and complex hardware/camera integrations.

SKILLS

AI-Assisted Dev & Tools: Claude Code, GitHub Copilot, AI Agent Orchestration, Model Context Protocol (MCP), Jira/Figma integrations

Languages & Frameworks: React Native, Redux, Context API, Expo, Vision Camera, Reanimated, RealmDB, SQLite, Swift, Java, PL/SQL

Mobile Expertise: In-App Purchases & Subscriptions, Push Notifications, Deep Linking, Animations, Gesture Handling, Expo Router

DevOps & CI/CD: GitHub Actions, Fastlane, Expo EAS, AppCenter, App Store & Google Play release management

Languages: English (C1 – Full Professional Proficiency), French (B1 – Intermediate), Portuguese (Native)

EXPERIENCE

Integrated Automotive Experience — *Mississauga, ON, Canada*Nov 2023 – Current
Mobile Software Developer

- Sole mobile engineer for 3 production React Native apps used daily by 10+ internal staff, with the product now being positioned for commercial release.
- Eliminated recurring bug complaints by taking full ownership of app stability and resolving a long-standing backlog of issues, turning a reputation for instability into zero reported bugs.
- Built an advanced camera-based vehicle damage documentation feature (Vision Camera + Reanimated), replacing manual photo checks and ensuring full damage coverage for every vehicle.
- Engineered a real-time vehicle test-drive scheduling flow using WebSockets, ensuring instant availability updates and eliminating booking conflicts.
- Restructured personal workflow around AI-agent orchestration (Claude Code, custom MCP servers), cutting multi-day feature implementations down to hours and enabling a single engineer to fully own architecture, delivery, and maintenance across 3 production apps.
- Managed the full deployment pipeline (GitHub Actions, Fastlane, Expo EAS) for both stores, including signing and alpha/beta testing groups.

Stone Payments (STNE – NASDAQ) — *Rio de Janeiro, Brazil (Remote)*May 2021 – Nov 2023
Software Engineer III

- Built and maintained the web frontend for a fintech back-office platform used daily by 2,000+ customers, as part of a 20-engineer team.
- Developed access recovery and identity verification features that helped reduce the KYC review queue, covering accounts, credit cards, and insurance products.
- Enforced quality through compulsory unit and end-to-end testing with Cypress.

NL Tech — *Caxias do Sul, Brazil*Apr 2018 – May 2021
Full Stack Developer

- Identified the need for push notifications in a hybrid Angular web app and independently proposed, designed, and delivered its migration to React Native, serving 5,000+ users.
- Reduced purchase order approval turnaround time by introducing push notifications, eliminating the need for users to manually check for status changes.
- Delivered mobile (Java) and backend (PL/SQL) features for ERP systems in tandem, gaining strong full-stack exposure.

PROJECTS

Both projects below were designed, built, and shipped solo end-to-end in 1–2 weeks — work that would typically take 2–3 months — using AI-assisted development workflows (Claude Code) across the full stack.

Acqua San Pelegrino — App Store | Google Play

Multi-tenant mobile app for swimming academies, built solo and published on the App Store and Google Play. Teachers record standardized performance tests and students track their evolution, with role-based access enforced via Postgres RLS. Built with Expo SDK 56, Supabase, and TanStack Query.

Central Condo — Google Play *(iOS pending App Store review)*

Full-stack condominium management platform, architected and built solo: REST API (Node.js/Fastify), admin web panel (React), and React Native/Expo mobile app with push notifications and biometric authentication. Used AI-assisted workflows (Claude Code) across the stack to accelerate delivery from backend to App Store submission.

Additional freelance work: *Eccel Engenharia (offline-first construction management app) and Lummon (fleet & driver management app), both delivered end-to-end and published to the App Store and Google Play.*

EDUCATION

Bachelor's Degree in Software Analysis and Development — Unopar (2008–2010)
