FELIPE DA CRUZ HOFFMANN

Senior Mobile Engineer (React Native)

felipejh@gmail.com | Caxias do Sul, RS, Brazil (GMT-3) | linkedin.com/in/hoffmannfelipe | felipehoffmann-portfolio.vercel.app

SUMMARY

Senior mobile engineer with 8+ years of experience building production React Native apps (Expo, TypeScript) for iOS and Android, from offline-first architecture to App Store and Google Play releases. Works every day with an AI-assisted workflow (Claude Code, MCP with Jira and Figma, specs first, tests and type checks as verification) and builds Node.js/Fastify backends alongside the apps. Fintech experience at Stone. Based in Brazil (GMT-3), available for remote work with international teams.

SKILLS

Mobile Frameworks & State Management: React Native, Expo, Expo Router, Redux, Context API, TanStack Query

Mobile Development: Vision Camera, Reanimated, Gesture Handling, Animations, In-App Purchases & Subscriptions, Push Notifications, Deep Linking

Languages: JavaScript, TypeScript, Swift, Java, PL/SQL

Web & Backend: React, Node.js/Fastify, REST APIs, WebSockets

Databases: PostgreSQL, Supabase, RealmDB, SQLite

Testing: Jest, Testing Library, Cypress

AI-Assisted Development: Claude Code (daily), AI agent orchestration, Model Context Protocol (MCP), spec-driven workflow, Jira and Figma integrations, image classification proof of concept (Create ML)

Cloud/DevOps & Release Management: GitHub Actions, Fastlane, Expo EAS, AppCenter, App Store and Google Play release management

EXPERIENCE

Integrated Automotive Experience — *Remote, Brazil and Mississauga, ON, Canada (hybrid)* Nov 2023 – Current

Mobile Developer

- Sole mobile engineer across three React Native apps: maintained one used daily by internal staff, took a second through app-store release, and now lead a ground-up rebuild of a third in a Turborepo monorepo.
- Shipped Node.js backend features on a production app, independently, to relieve pressure on the backend engineer.
- Wrote a small native module in Kotlin and Swift, exposed to React Native as a TurboModule, to detect TestFlight or internal distribution.
- Built in-app purchases and subscriptions with server-side receipt validation, and got the legacy app approved after repeated App Store rejections.
- Shipped about 30 releases between September 2024 and December 2025 with GitHub Actions, Fastlane and Expo EAS, and cleared the legacy app bug backlog.
- Built a WebSocket-based test-drive scheduling flow with real-time availability that prevents booking conflicts.
- On my own initiative, added animations (smooth opening and closing of cards, transitions) with Reanimated to improve the feel of the apps.
- Work every day with an AI-assisted workflow: Claude Code with Jira and Figma through MCP, specs first, and tests and type checks to verify the output.

Stone Payments (STNE – NASDAQ) — *Rio de Janeiro, Brazil (Remote)* May 2021 – Nov 2023

Software Engineer III

- Built and maintained the web frontend for a fintech back-office platform used daily by 2,000+ customers, working with a 20-engineer team.
- Served as technical lead for a team of three for three months, providing mentorship and guiding technical decisions.
- Built account-recovery and identity-verification features, helping reduce the KYC review queue.
- Established unit and end-to-end testing with Cypress, improving confidence in platform changes.

NL Informática — *Caxias do Sul, Brazil* Apr 2018 – May 2021
Full Stack Developer

- Independently proposed, designed and delivered the migration of a hybrid Angular web app to React Native, reaching 5,000+ users.
- Introduced push notifications for purchase-order approvals, alerting users to status changes and reducing reliance on manual checks to track turnaround.
- Delivered Java mobile features and PL/SQL backend functionality for ERP systems, and mentored trainee and junior developers.

Focco Sistemas de Gestão S.A. — *Caxias do Sul, Brazil* Mar 2017 – Nov 2017
Full Stack Developer

Independent PC Maintenance Technician — *Caxias do Sul, Brazil (Self-employed)* 2010 – 2017
Freelance Technician

EDUCATION

Technologist Degree (Tecnólogo), Systems Analysis and Development, Unopar (2008–2010)

PROJECTS

Acqua San Pelegrino — App Store | Google Play

Tech: Expo SDK 56, Supabase, TanStack Query, Postgres RLS

Built and published a multi-tenant swimming academy app solo, with role-based data access through Postgres Row-Level Security. More than 200 users.

Central Condo — App Store | Google Play

Tech: Node.js/Fastify, React, React Native, Expo, Claude Code

Built a condominium management platform solo: Node.js/Fastify REST API, React admin panel, and a React Native app with push notifications and biometric login. More than 200 users.

Eccel Engenharia and Lummon

Delivered two freelance mobile apps end to end, both on the App Store and Google Play: an offline-first construction management app (Eccel Engenharia) and a fleet and driver management app (Lummon).
